Curriculum DAG Structure

UCB-Guided Seed Selection (one descent)

Step 1. Pick root by UCB ($\hat{\mu} + \lambda_{\text{ZPD}}\,\text{ZPD} + c\sqrt{\ln N_{\text{tot}}/n}$).

Step 2. Compare U_{stay} vs. $\max_c U_{\text{child}}$; descend if child wins by margin m.

Step 3. Stay wins / no children; use x''_3 as next Q-Gen seed; backprop $r \cdot \gamma^d$.
